

**you need a reliable  
4-inch submersible motor,  
your customers just want  
water.....**

The new CentriPro™ Submersible motor is ideally suited for all 4-inch residential water wells and is available in 2-wire and 3-wire models.

The 2-wire permanent split capacitor (PSC) design motor reduces pulsation noise. It features a built-in capacitor and lightning protection and is hermetically sealed to ensure it stays in the well no matter how tough the conditions.

The CentriPro motor's laser welded construction and 700-lb., three-shoe Kingsbury type thrust bearing make it one of the toughest motors in the industry. The built-in check valve allows well water to enter the motor as needed.

For more information about the new 4-inch CentriPro motor or the 6-inch and 8-inch CentriPro motors and controls, contact your local pump representative or visit [www.centripro.com](http://www.centripro.com).

*Engineered for life*
